

ECI

EXECUTIVE CONCEPTS INC. MANAGEMENT CONSULTANTS

The **Printing Module** designed by **Executive Concepts Inc.**, gives the user the flexibility to print multiple copies of reports to different printers, at different workstations or different warehouses. This module integrates directly with AccountMate printing functions.

This module is particularly useful when clients need copies of a report sent to different workstations or warehouses throughout the organization. For example, a sales order is entered into AccountMate in the Calgary office. One copy of the order needs to be printed in the credit department in Toronto. Another copy of the order needs to be printed in the appropriate warehouse, which could be located anywhere in the country. ECI's Printing Module allows all these copies to be printed automatically at their respective locations.

Network printers have to be installed with the same name on each workstation as in AccountMate. We recommend using IP Addresses instead of Printer Names to prevent confusion.

| Ccompanyid | Cmodule | Crptid | Ctable | Ccustno | Cwarehouse | Ccomputer | Cprinter | Ccopy | Ncopy | Lactive | Mprop |
|------------|---------|--------------|--------|---------|------------|-------------|-----------------------------|-----------------|-------|---------|-------|

| 999 | AR | AR_PRINTINVC | | | MAIN | | HPLaserJet6P | COPY 1 | 2 | T | memo |

Report Printing

Fields in reprint.dbf include: Computer Name (or Workstation Name), Report ID, Printer Name, Copy Name. Fields can also be Copy Names or any other report parameter that needs to change for each copy. Reports can be printed to different printers from different workstations.

The same report can be used for both Warehouse and Report Printing Configurations. The user is also notified of what is being printed and where, and can also be prompted to confirm the printing.

The Report Print Maintenance combines all of these features. Printing can be done by Company, Customer, Warehouse, or Workstation.
